

Davi Castro Jorge da Costa

Full Stack Developer · Network Infrastructure

Uberlândia, MG · Brazil +55 34 99333-6186 davicjc@gmail.com linkedin.com/in/davicjc github.com/Davicjc davicjc.com

PROFESSIONAL SUMMARY

Full stack developer working across ISP network infrastructure. At Audicom Telecom, where I grew from support agent to deputy supervisor, I build the operation's internal systems, integrate biometrics and facial recognition with access control, and run servers, VPNs and network gear monitored with Grafana and Zabbix. Before that, I supported Algar Telecom's international wholesale customers in English, including Verizon, BT and China Telecom. More than 20 websites and systems shipped for companies and independent clients.

CORE SKILLS

- Full stack development
- Python
- JavaScript & TypeScript
- C#
- Node.js
- React
- Firebase (Firestore, Auth)
- REST APIs
- Computer vision (OpenCV)
- Access control & biometrics
- ISP networking: MikroTik, Cisco, Ubiquiti, Datacom
- BGP, RPKI & OSPF
- VMware ESXi
- WireGuard
- Linux
- Docker
- Grafana & Zabbix
- SSO (SAML/OIDC)
- NOC & HelpDesk supervision
- Fluent English

PROFESSIONAL EXPERIENCE

Deputy Supervisor · Full Stack Developer · Network Technician

Sep 2025 – present

Audicom Telecom & Audicom Tecnologia · Uberlândia, Brazil

Support agent → Developer → Deputy Supervisor

- Built NexusAtlas, a web system for field service orders in JavaScript and Firebase, syncing data in real time between the office and field technicians with no server to maintain.
- Built Audicom Hub, an internal portal for tickets, maintenance, a knowledge base and technical patrols, with three-level authorization enforced in Firestore security rules and automatic drafts for field use.
- Develop Python and C# software that integrates biometrics and facial recognition with turnstile access control.
- Run VMware ESXi servers, WireGuard VPN tunnels and MikroTik, Cisco, Ubiquiti (UniFi/UISP), Datacom, V-SOL and TP-Link equipment, monitored with Grafana and Zabbix.
- Shipped the company website, an in-house speed test (LibreSpeed) and the customer service pages reached through QR codes on company vehicles and materials.
- Rolled out an LMS platform with single sign-on over SSO (SAML/OIDC) and supervise the NOC, HelpDesk and network operations teams, organising the technical request queue.

Bilingual Enterprise Account Manager

Dec 2023 – Jun 2025

Algar Telecom

Agent → Premium team → Wholesale · Enterprise accounts

- Supported the carrier's wholesale segment in English, serving international customers such as Verizon, BT and China Telecom.
- Provided advanced technical support, driving critical infrastructure incidents through to resolution.
- Tracked customer infrastructure in Grafana and Zabbix.

Founder and developer

2023 · closed

Web pra Você · own business

- Built websites for small and mid-sized businesses, covering proposal, design, development and launch.

Customer service agent

Oct – Dec 2023

Callink · Bradesco operation

- Customer service using structured questioning to understand and resolve complex requests.

SELECTED PROJECTS

Face Safety github.com/Davicjc/FaceSafety

Facial recognition access control with camera enrolment and electronic lock release. 1st place among 60 academic projects at Uniube; 16 stars on GitHub.

[Python](#) · [OpenCV](#) · [face_recognition](#)

ROAs Monitor Status github.com/Davicjc/ROAs-Monitor-Status

Daemon that alerts on Telegram when an ASN's ROAs become invalid or expire, before RPKI-validating carriers silently drop the routes.

[Bash](#) · [RPKI](#) · [Routinator](#) · [systemd](#)

Patricia Moura Lash Design

davicjc.github.io/PatriciaMouraLashDesign

Website with real-time online booking for a beauty studio: booked slots become unavailable instantly, with an admin panel for the schedule.

[JavaScript](#) · [Firestore](#) · [Firebase Auth](#)

Telemetry Portal github.com/Davicjc/telemetry-portal

OSPF and BFD neighbour monitoring for MikroTik routers (RouterOS v6/v7), with a Telegram alert on every drop and recovery. Open source, MIT licence.

[Python](#) · [Flask](#) · [RouterOS API](#) · [Grafana](#)

Hub CJC

Project, client and contract management. Contracts are modelled as data, with versions auditable by SHA-256 hash and client signature by link.

[TypeScript](#) · [React](#) · [Firebase](#)

FitIA davicjc.github.io/FitIA

Webcam-based rep counting and form analysis, processed entirely in the browser — video never leaves the device.

[JavaScript](#) · [MediaPipe](#) · [Canvas](#)

EDUCATION

BSc in Information Systems

Feb 2023 – Dec 2026
(expected)

University of Uberaba
(Uniube)

Advanced English

completed 2019

Wizard

LANGUAGES

Portuguese — native

English — fluent — Wizard certificate; international B2B support

Spanish — basic

CERTIFICATIONS

Microsoft Learn · 13 achievements

Migrating workloads and SQL Server to Azure, Azure database administration, Linux and Java on Azure, AI solutions and AI engineering, GitHub Copilot and Azure Copilot; Migrate & Modernize Challenge.
